Subject	Superannuation schedule FY2024-27 — Mechanical Maintenance and Utilities Operations	Reference	HR/SUP/2024/117

Message

Dear Krishnan,

Please find below the confirmed superannuation schedule for Mechanical Maintenance and Utilities Operations covering financial years 2024-25 to 2026-27. Departmental heads are requested to confirm handover and knowledge-capture plans for each name by the end of next month.

Rajesh Kumar (EMP-1187), Senior Technician — Rotating Equipment, completes 23 years of service and retires in March 2027.

Superannuation schedule

Employee	ID	Role	Service (years)	Superannuation date
Rajesh Kumar	EMP-1187	Senior Technician — Rotating Equipment	23	2027-03-31 (March 2027)
S. Ramaswamy	EMP-0904	Foreman — Boiler & Utilities Operations	31	2024-11-30
B. N. Joshi	EMP-1042	Boiler Attendant — A Shift	27	2026-07-31

Knowledge risk flagged by Asset Reliability

- Rajesh Kumar is the only technician at BVPL certified on the Sulzer CP-series bearing replacement procedure (SOP-MECH-014).
- He personally executed the August 2022 P-101 bearing replacement and the LP-101A overhaul; neither job has a written method statement beyond the generic SOP.
- His judgement on when a Sulzer CP bearing 'sounds wrong' before the vibration alarm picks it up is not documented anywhere in the maintenance system.
- S. Ramaswamy (EMP-0904), Foreman — Boiler & Utilities Operations, with 31 years of service, superannuates on 30 November 2024 and holds the equivalent operating knowledge for V-201.
- Handover plan and knowledge-capture sessions are to be scheduled by Asset Reliability.

Requested actions

Action	Owner	Due
Nominate a successor for the Sulzer CP-series bearing replacement certification	D. Krishnan	2024-08-31
Schedule knowledge-capture interviews for P-101, P-102 and LP-101A	Priya Sharma	2024-09-30
Write a method statement for the P-101 bearing replacement beyond the generic SOP	Rajesh Kumar	2024-10-31
Confirm V-201 statutory inspection cover after the November superannuation	D. Krishnan	2024-10-15

Rajesh Kumar has been with the plant since 2004 and is the named competent person on every bearing replacement executed on the Unit-2 feed water pumps. S. Ramaswamy holds the equivalent operating knowledge for the deaerator V-201 and its statutory examination history, and leaves us in November this year. I would be grateful if both handovers were treated as priority.

Regards,

Meera Iyer
